

Do I need an oven with Wi-Fi connectivity?

A Wi-Fi connection might not be on the shortlist of features you want from an oven, but the convenience it brings to your cooking might just change your mind.

There's no doubt that our homes are getting smarter. Like washing machines and dishwashers, ovens have seen major technology developments over the last few years. In the past, ensuring your soufflé didn't sink would have been very much down to you. But today, Wi-Fi connected ovens help your meals turn out perfectly, all with the benefit of being controlled from your phone or tablet. We take a look at some common questions about Wi-Fi connected ovens.

How does a Wi-Fi connected oven work?

[All of our Wi-Fi enabled appliances](#), including our ovens, can be managed via the Home Connect app. Simply download it, pair your oven over a Wi-Fi connection and then manage it via your smartphone or your tablet. Once, the oven is paired over Wi-Fi (a one-off action) you can operate the app from your mobile network too, wherever you are, at home or on the go. It can also be controlled from multiple smart devices, so you can get your partner to help with the cooking too!

What can a Wi-Fi connected oven do?

So many things! Smart ovens can really revolutionise how you spend your time in the kitchen. Preheating, controlling the temperature and finding the right baking time; all of these are possible remotely with a connected oven.

Ever had that sinking feeling that you've left home and not turned off the oven? With a smart oven you'll never have to worry again – you can check the app to see the oven's status and turn it off remotely if you did. You'll even get a notification on your phone when the oven is ready.

What other benefits are there?

Messy hands while prepping dinner and forgot to turn on the oven? No worries! You can use voice activation to turn on your oven using [Amazon Alexa](#) or [Google Assistance](#) devices. Missing some ingredients? Not a problem! The Home Connect app allows you to create a shopping list or order the missing ingredients directly within it.

The app can also provide you with cooking tips, videos and plenty of new recipes tailored specially to your oven and it's compatible with Google and Amazon Alexa devices. You can also seamlessly send the cooking times and temperatures of each recipe directly to your smart oven, making the whole process even easier.
