COOKING PASSION SINCE 1877

The difference between NEFF's dishwashers and which one you should purchase for your home

Ingredients

Method

Cooking for others is a joy, until you need to clean up the mess you've made in the kitchen. Luckily, there is a handy appliance that can take care of that for you.

How does a dishwasher work?

When you turn on your dishwasher, water is pumped in and heated. Then detergent is released and water jets wash the dishes. After that, the dirty water is drained away and everything is rinsed, before the dishwasher drains out again. While that might sound like a lot of water, in many cases you will actually use less water than hand washing, and higher temperatures achieved inside the dishwasher ensures that no germs or bacteria hang around.

Things to consider before buying a dishwasher

Washing dishes is a high energy and water consuming activity so there are many things you should consider before purchasing a dishwasher. This includes:

- Noise levels
- Energy use
- User friendly features such as control panels and digital displays
- Water handling
- Internal rack sizes and configurations to suit your dishes. Click here for instructions on how to stack your NEFF dishwasher.

Which NEFF dishwasher is right for you?

NEFF dishwashers are designed with home chefs in mind – people who love cooking up a storm and aren't afraid to make a mess doing it. This means that even the most bubbled over dishes, baked in ramekins and caramelised grill pans will come out of the dishwasher sparkling clean. NEFF's range of dishwashers include...

Fully-integrated dishwashers

Full integrated dishwashers are remarkably quiet and hidden from view with the ultimate built in finish that will integrate seamlessly into your kitchen cabinets. The 60cm range has an innovative DoorOpen sensor which means you can open the door with a single touch, great for handle-free kitchens. Certain models also have a TimeLight feature which projects the washing status on the floor so you don't open the door mid-cycle. Click here to check out NEFF's fully integrated dishwashers.

Semi-integrated dishwashers

Semi integrated dishwashers are a popular choice in kitchen design. You can have a custom front, to suit your furniture, while still having a centre control panel that is easy to access and operate. Home chefs love the speciality Chef70° function for powerful cleaning and drying performance on scuffed up pots and pans. Click here to check out NEFF's semi integrated dishwashers.

Built under dishwashers

Built under dishwashers are made out of stainless steel which will fit into your new or existing kitchen style. It has a 4 star energy rating and 5 star water rating making it an efficient and environmentally friendly appliance for your home. Plus, you can adjust the height of the dishwasher to sit perfectly under your cabinetry. Click here to check out NEFF's built in dishwashers.

Why choose a NEFF dishwasher?

There are several reasons why NEFF's dishwashers are a great appliance for your busy kitchen. These include...

- VarioSpeed which allows you to shorten the wash cycle time when you are in a rush without sacrificing the quality of the cleaning cycle.
- Flex baskets and drawers which allow you to adjust the height of your baskets and drawers so you can load the appliance according to your unique needs.
- Chef70° which is designed to clean heavily soiled or crusted plates, cups, pots and dishes.
- Stylish designs in a range of fully integrated, semi integrated and built under models.
