

# Setting up your NEFF oven

## Ingredients

---

## Method

---

Important note: You are required to “cook-in” your appliance for the first time in order to remove the new-appliance smell. For FullSteam models you are also required to run a steam function before use. These steps are not covered in this video. Please check your user manual for further instructions on what is required before you begin using your new NEFF oven.

Contact your local council or water supplier for water hardness information.

## Notes
